Zhuohang Wu (John Wu)

Tel: +44 07884039246 E-mail: zhuohang2024@163.com London

Technical Expertise

Robotics and AI, Embedded Systems and Control, Internet of Things

Education Background

MSc in Systems Engineering for the IoT, UCL, UK (Sep, 2024 - Aug, 2025)

BSc in Automation (EEE), Northeastern University, China (2021 - 2024), **Twice** Scholarship

Team Projects

Dec 2024: A multi-agent navigation system in simulation and real world.
Optimized control strategies, addressed challenges in simulation-to-reality mapping.

Aug 2024: Bachelor Project: Novel Electromechanical Switch Design and Application in Robotic Arms.
Based on robotic kinematics. Won **Outstanding Graduation Project.** And ***Publication1.***

Jun 2024: Hand-hold Control Box for ***SIASUN*** Robotic Arm during Internship.
Peripheral chips and devices driver development and debugging.

Jul 2022: Wireless Controlled Omnidirectional Mobile Platform while Intern in ***ISOM***.
Closed-loop speed & position control, anti-slip acc & deceleration. Applied ***Patent1.***

Apr 2021: Electromagnetic Testing Device for Oil and Gas Pipelines.
Designed embedded system including electromagnetic testing PCB and software.
Won **Gold Award** in the "Internet+" Competition of Liaoning Province. Granted ***Patent2.***

Jan 2021: DJI RoboMaster International Robotics Competition, dominating the major Hero Robot.
University: As team **leader** and won First Prize, 250% faster than the 2nd group.
Northern China: As electronic control group **leader**, won **First Prize**. And ***Publication2.***

Internship Experience

15.Apr.2024 - 17.Aug.2024: ***SIASUN*** Robot & Automation Co., Ltd:
R&D of robotic arms control box, met control communication and UI display requirements.

03.Jul.2023. - 17.Jul.2023: Ansteel Group Corporation:
Visited and studied molten steel, steel coil, coating, seamless steel pipe production lines.

07.Jul.2022 - 11.Aug.2022: Supcon Technology Co., Ltd.
Installed and debugged 2 sets of intelligent traffic terminals.

02.Jun.2022 - 06.Jul.2022: ***ISOM*** of China (Hangzhou) Co., Ltd.:
R&D of **AGV** robots, implementing the chassis control subsystem.

01.Jul.2020 - 20.Jul.2020: Senyuan Road & Bridge Co., Ltd.,:
Developed an adjustable DC backup supply. Granted ***Patent3.***

Zhejiang Lab brain-inspired chip Dep:
Studied Darwin chip which supports spiking neural networks.

Red Cross Society of China:
Volunteered in five activities, 201 hours in total.

Practical Skills

Embedded Systems

Proficient in ARM MCUs and **Keil**, including **STM32F1xx** and F4xx, Arduino, Ras-pi, ESP32.
Proficient in **USART, SPI, I2C,8080, and CAN** protocols, register level debugging experience.
Skilled in adjust and design **PID** controllers in motor speed and position, **RTOS**.
Temperature and liquid level control, **Smith predictor** design and adjusting.

Hardware Design

Circuit design with **Altium Designer**; PCB soldering and assembly; modelling with **Solidworks**
Based on datasheet to develop drivers and peripheral circuits.

Machine Learning: Random forest, PCA, CNN, Gaussian process, Bayesian Optimization, OpenCV, etc.
Programming Languages: C/C++, Python, MATLAB, JavaScript, HTML.
Language Proficiency: Native **Mandarin** speaker; **TOEFL**: 104/120, CET-4: 559/710, CET-6: 508/710.

Personal Interest Projects

Fixed-Wing Flight Control System

GPS, OLED, wireless, gyro attitude estimation and stabilization, auto-return, waypoint navigation

PLC-Based Vision Sorting System

A CV based robotic arm sorting system, controlled via PLC to sort and transport efficiently.

Courtyard Solar Self-Sufficient Power System

Network camera, IoT, **MPPT**, DC-AC inverter, **SPWM**, Li-ion battery BMS.

Smart Toilet System Design

Smith temperature control, multi-level menu design, multi-threaded design.

Hardware signal generator

Pure hardware to generate sin, square, triangular, and sawtooth with adjustable freq and Vpp

STM32 Oscilloscope using **FFT**

Other Achievements

As **Leader**, won the National level Undergrad Innovation Training Program on "Design and Development of Smart Video Surveillance Holographic Digital Twin System" in June 2022.

Co-leader of the Intelligent Car Lab in the TI Cup Competition in October 2022.
Represented Northeastern University in the **TI Cup National Competition** in August 2023.

Patents and Publications

Publication1: "Novel Electromechanical Switch Design and Application in Robotic Arms" (Archived in University Library as Outstanding Graduation Project, First Author, 2024)

Patent1: Method to Correct Motor Speed Measurement Error First Inventor, Substantive Exam 2023)

Publication2: "Mechanical Design and Wheel-Leg-Body Cooperation Control of a Step-Climbing Robot" (*Journal of Field Robotics*, 2022)

Patent2: Magnetic Flux Leakage Detect Device with Switchable Excitation Direction (2021)

Patent3: Speed Measurement Device and Method for Vehicles (First Inventor, 2020)
